Graphic display walls just got bigger and better

Apex Executive Interiors graphic display walls can now be printed larger and more economically than traditional vinyl. Boasting a single print size of up to 3.2m high by 100m coupled with our enhanced image resolution printing process makes this a great solution for any contemporary office interior.

The image definition and light diffusion properties makes our backlit option a great way for your display to really stand out. Using our new graphic wall display system it's easy to change the look of a whole wall in minutes.

New words defining the world around us

The ever changing face of a contemporary office fitout is incorporating a more holistic naming practice for office areas putting a stronger emphasis on the activity the employee is engaged in.

- Focus** = (Working spaces, offices or workstations)
- Collaborate** = (Projects working together and Informal meeting rooms)
- Learn** = (Training and seminars)
- Rejuvenate** = (Breakout and time out quiet rooms)
- Socialise** = (Breakout kitchen, lunch rooms and informal meeting areas)

Get your message across with our GIANT 70 inch touch screen display

True user-friendliness is built into our ultramodern big screen it's easy to use and intuitive allowing you to focus on your presentation.

It's designed for smooth and effortless communication in a wide range of contexts. The highly responsive interface allows for up to four people to write on the screen at the same time using touch pens or fingers.

A few of the key features include:

- 70 inch screen size
- Touch operated on screen display
- Multifaceted wireless communication.
- Capture screens and save them to a mobile device
- Front mounted speakers
- Handwriting recognition
- Quick startup
- Connect pads together for large presentations

A review of emerging trends from NeoCon

Our interior designers have returned from NeoCon buzzing with new ideas. Held in Chicago every year and attracting more than 700 exhibitors NeoCon is the largest commercial interiors show in North America.

This year the focus was less on traditional workstations and offices and more on flexible applications and the seamless integration of collaborative areas, focus rooms, soft seating, huddles, hot desks, booth seating, high benches and multipurpose use areas. These adaptable inclusions allow for a more versatile office layout with an increased employee density while retaining an open plan look and feel.

Designing optimal workplace environments for the mental and physical wellbeing of staff was the number one trend at the show. Creating workplace conditions that evoke the comforts of home help promote well-being in the office environment.

Providing a more relaxed atmosphere leads to happier and healthier employees who in turn produce better and more productive work. The influx of residential design on office furniture has become more influential than ever before. Wood-grain and natural tones with bursts of color could be seen throughout NeoCon.

The benefits of happier employees:

- Outperform the competition
- Higher productivity
- Higher profitability
- Lower turnover of staff
- Less absenteeism

More companies are getting people out of their seats and encouraging movement through the workplace to counteract the negative effects of sitting for long periods of time. Walking and standing meetings are now very popular and also tend to be shorter and therefore more productive.

Hot desking is a great concept but can lead to ergonomic issues, one size does not fit all. If workplaces want to maintain their approach to employee wellbeing adaptable workspaces are essential. Workers need to be able to quickly and easily adjust their chair, screen and desk. Sit-stand desks were again a popular feature in the show.

Particularly evident this year was the focus on reducing distractions in the office landscape, of special interest were the new sound absorption techniques deployed in open concept offices.

The design team are already incorporating some of the innovated ideas from Chicago into our new office fitouts.

CASE STUDY

Client Profile:

SSI is a leading not-for-profit organisation providing a range of services in the areas of humanitarian settlement, asylum seeker assistance, foster care, employment services and disability support in NSW.

Scope of Works:

Locate a suitable building in the Bankstown area for the specific needs of SSI. Design and construct the fitout to a very tight schedule.

Challenge:

The building was an empty shell and didn't include facilities such as lighting, ceilings, air conditioning, fire services, data-communication infrastructure and power supply.

Solution:

Good communication with all the stakeholders and careful planning. Detailed work plans and hour by hour scheduling played a critical part in delivering the project on time.
